*We take care of ecology, high quality and precision of execution. Modern design combined with many years of experience in the production of heating equipment guarantees the satisfaction of our esteemed customers for many years.*

**Robert Dziubela**  
CEO

Defro company was established in 1973. At the time we provided iron-working and welding services. In time our offer included the production of central heating boilers. Currently we are the leader among the producers of heating appliances in Poland and one of the biggest in Europe. We have at our disposal a modern, computerized production plant. We constantly expand and upgrade our machine facilities which consist of several technological blocks.

Our own construction office is an asset which enables complex project realization starting with preparation of a choice concept and ending with serial production. All the products are made from start to finish in the company. A lot of emphasis is put on post-purchase and guarantee service. Thanks to a well developed technical support network our Service Centre swiftly and efficiently reacts to clients requests, thus providing a professional post purchase service of the offered products.

The company constantly expands its external service network, additionally cooperates and periodically trains distributors and fitters from within Poland. The next stage of the company's activities is the addition of Defro Home series pellet stoves, free standing stoves and fireplace inserts to the offer.

**BIMSCHV** 2  
stufe

The rigorous EU regulations concerning the emissions of boilers flue gases, stoves and other heat equipment are due to be introduced in 2022. However in our offer, we already have fireplace inserts and boilers which comply with the strictest environmental regulations. The worsening condition of the environment is reflected by much more restrictive law regulations according to EU Directive commonly known as Eco design. Research has proven that our products comply with BlmSchV2 and Eco design norms. Not only we offer excellent quality inserts but also protect the environment by minimizing dust and carbon dioxide emissions.
